

# ODOR GONE

## ODOR ELIMINATOR

The  
Natural  
Way

### Features

- ◆ A proprietary stabilization system formulation instantly binds odor-causing molecules
- ◆ A SPECIAL BLEND of selectively adapted bacteria proprietary microbial consortium destroys the bound odor molecules

### Description

**ODOR b GONE** is a concentrated formula specifically designed to eliminate objectionable odors in institutional and industrial settings. **ODOR b GONE** is a broad spectrum odor counteractant which immediately deactivates hydrogen sulfide, ammonia, volatile fatty acids, pet malodors, feces, urine, garlic and tobacco odor. **ODOR b GONE** is a technologically advanced odor controller that combines the fast action of chemistry with the long-term benefits of microbes.

Historically, odor control has usually involved the application of perfumes or odor maskants, which do not eliminate odor but actually increase it by adding another less objectionable odor to overpower the malodor.

**ODOR b GONE** actually captures and destroys the odors, instead of simply covering them up. Proprietary bacterial cultures are selected for optimum extracellular enzyme production, assuring efficient breakdown of organic wastes. Odors aren't just covered up; they are eliminated at the source!

**ODOR b GONE** is the result of intensive R&D efforts to engineer an institutional and industrial odor controller and cleaner that goes well beyond the capability of other products available. To prevent the return of the odor, specialized microbes convert the odor-causing organics to benign cellular components plus odorless carbon dioxide and water. This combined chemical and microbial effect makes **ODOR b GONE** a powerful yet safe and environmentally friendly odor controller.

**ODOR b GONE** also contains sophisticated, non-resoiling cleaning capabilities designed specifically for carpet and upholstery stain removal.
